## **Vibro-Meter® VE210 velocity transducer**

Dear Customer,

We are contacting you further to your past purchase of a VE210 velocity transducer from Meggitt's Vibro-Meter® product line. While we trust that this product has served you well, Meggitt is committed to offering our customers the best possible measurement and monitoring solutions, to help you to get the best from your machinery. This naturally involves updating and replacing items in our product range.

This letter is to inform you that the new version 012 of the VE210 is compliant with the European Union (EU) directive 2011/65/EU on the restriction of the use of certain hazardous substances in electrical and electronic equipment (commonly referred to as the restriction of hazardous substances directive or RoHS 2).

Following extensive tests carried out by our Engineering team, we can guarantee that the new version of the VE210 is a fit and functionally equivalent replacement. Concerning form, all external dimensions remain the same except for the height which has been reduced for ease of installation in cramped or small spaces. In addition, we have also taken this opportunity to improve the rejection of frame voltage.

The affected part number (PNR) is:

- 410-210-000-011 replaced by 410-210-000-012.

Note: The ordering option codes for configuring the product remain unchanged.

After the stock of the existing version of the VE210 runs out, the new version will automatically be confirmed for all deliveries. This transition is expected in Q4, 2017.

Please do not hesitate to contact your Meggitt representative, who will help you with any further questions you may have.

Yours faithfully,

### **Frédéric Micco**
