Discontinuation of the VibroSight Portable Analyser

Please take note that the VibroSight Portable Analyser (PNR 600-021) will be discontinued by May 2019 due to lack of commercial success and obsolescence issues on the computer main components.

As an alternative to the VibroSight Portable Analyser we propose the use a laptop computer in combination with a VM600 ABE056 slimline rack containing an XMV16 card and a VibroSight software licence. The slimline rack can be easily transported within a custom fit suitcase with its cable accessories available from our product catalog with PNR and ordering code VM600SYS/B0/C56P/Dx/Hxx/BB01/ZX01, with D5 for 110/220 VAC or D2 for 24 VDC power supply option and HEU, HUS, HUK or HCH power cord type with D5 option, otherwise H00 with D2 option. Keeping the computer separate from the acquisition system results in a more modular and flexible data acquisition solution.

Should you need to replace a VibroSight Portable Analyser, please do not hesitate to contact your Meggitt representative, who will help you in choosing the best solution for your application.

Yours sincerely
