**DATA SHEET**

**vibro-meter®**

**TQ902/ TQ912, EA902 and IQS900 proximity measurement chain**

**KEY FEATURES AND BENEFITS**

- From the vibro-meter® product line
- Non-contact measurement based on eddy-current principle
- Available in standard versions and Ex versions certified for use in potentially explosive atmospheres (hazardous areas)
- Conforms to API 670 5th edition
- 1, 5 and 10 m chains
- Temperature-compensated design
- Voltage or current output with protection against short circuits
- Current-signal transmission over distances up to 1 km
- Frequency response: DC to 20 kHz (−3 dB)
- Linear measurement range: 2 or 4 mm
- Temperature range (sensor): −40 to 180 °C

**KEY FEATURES AND FEATURES (continued)**

- Optional diagnostic circuitry detects sensor, cabling and/or signal conditioner problems
- Suitable for use in functional safety contexts: SIL 2 in accordance with IEC 61508 and PL c Cat 1 in accordance with ISO 13849
- IQS900: Removable screw-terminal connectors and DIN-rail mounting

**APPLICATIONS**

- Shaft relative vibration and gap/position measurement chains for machinery protection and/or condition monitoring
- Ideal for use with VM600 and/or VibroSmart® machinery monitoring systems
- API 670 applications
- Safety-related applications
- Speed (tachometer) sensor/measurement chain for overspeed detection system (ODS) applications

DESCRIPTION

Introduction
The TQ902/TQ912, EA902 and IQS900 form a proximity measurement chain, from Meggitt’s vibro-meter® product line.

TQ9xx-based proximity measurement chains allow contactless measurement of the relative displacement of moving machine elements, and provide an output signal proportional to the distance between the sensor tip and the target. Accordingly, these measurement chains are ideally suited for measuring the relative vibration and axial position of rotating machine shafts, such as those found in steam, gas and hydraulic turbines, as well as in alternators, turbo-compressors and pumps.

A TQ9xx-based proximity measurement chain consists of a TQ9xx proximity sensor, an optional EA90x extension cable and an IQS900 signal conditioner, configured for a particular industrial application. The EA90x extension cable is used to effectively lengthen the front-end, as required. Together, these form a calibrated proximity measurement chain in which each component is interchangeable.

The IQS900 signal conditioner is a versatile and configurable device that performs all required signal processing and generates the output signal (current or voltage) for input to a machinery monitoring system such as a VM600 or VibroSmart®. In addition, the IQS900 supports optional diagnostic circuitry (that is, built-in self-test (BIST)) that automatically detects and remotely indicates problems with a measurement chain.

TQ902/TQ912 sensors and cabling
The active part of a TQ9xx proximity sensor is a coil of wire that is moulded inside the tip of the device, made of PPS (polyphenylene sulfide), a high-performance, high-temperature engineering thermoplastic. The sensor body is made of stainless steel. The target material must, in all cases, be metallic.

The TQ902 and TQ912 proximity sensors are essentially the same except that the TQ902 is for standard-mount and the TQ912 is for reverse-mount applications. Both sensor bodies are available with metric or imperial threads and have an integral coaxial cable terminated with a self-locking miniature coaxial connector. TQ9xx sensor’s integral cables and EA90x extension cables are available in various lengths, which can be combined to obtain a particular total system length (TSL) for an application.

Optional interconnection protectors (IP172), junction boxes (JB118) and other housings are available for the mechanical and environmental protection of the connection between a TQ9xx sensor’s integral cable and an EA90x extension cable.

IQS900 signal conditioner
The IQS900 signal conditioner contains a high-frequency modulator/demodulator that supplies a driving signal to a TQ9xx sensor. This generates an electromagnetic field in the tip of the sensor, which generates eddy-currents in the metallic target. When the target moves, the eddy-currents change, which causes a change in the electrical characteristics of the TQ9xx that the signal conditioner converts into a signal that is proportional to the distance to the target.

The IQS900’s output is an analogue signal consisting of a dynamic component (AC) that corresponds to the measured vibration (displacement) and a quasi-static component (DC) that corresponds to the measured gap. The output can be configured as a current or a voltage signal, suitable for transmission to a monitoring system via current (2-wire) or voltage (3-wire) transmission cables, respectively.

For an IQS900 signal conditioner with optional diagnostics, the quasi-static DC component also functions as a diagnostic indicator. That is, the IQS900’s diagnostic circuitry continuously checks the integrity of the measurement chain and will drive the measurement/diagnostic component (DC) outside of its normal operating range to indicate a problem with the sensor, the cabling and/or the signal conditioner itself.

For test purposes, the IQS900 includes a “raw” voltage output signal and a test input signal that allow the measurement chain/system operation to be tested in situ, thereby simplifying commissioning and troubleshooting.
DESCRIPTION (continued)

Application information
An IQS900 signal conditioner with diagnostics automatically and remotely indicates the health/status of a TQ9xx-based measurement chain so you always know when measurements can be trusted. This helps to ensure that machinery is operated safely and reliably, extending its life and reducing costs.

Equally important, TQ9xx-based measurement chains using an IQS900 with diagnostics are SIL 2 “by design” so they bring enhanced reliability and significant risk reduction, making them suitable for use in safety-related applications (functional safety contexts).

Further, TQ9xx-based measurement chains are form, fit and functionally equivalent replacements that match or better the outstanding performance of TQ4xx-based measurement chains. Each component is interchangeable, so existing TQ4xx-based proximity measurement chains can be quickly and easily replaced or upgraded. For example, an IQS900 signal conditioner without diagnostics is a direct replacement for an IQS45x in most TQ4xx-based measurement chains.

Note: A TQ9xx-based measurement chain using an IQS900 configured with a current output and a GSI127 galvanic separation unit, allows transmission over distances up to 1 km – longer than any other solution.

For specific applications, contact your local Meggitt representative.

SPECIFICATIONS

Overall proximity measurement chain

Operation
Sensitivity
- Ordering option code B21: 8 mV/µm (203.2 mV/mil)
- Ordering option code B22: 2.5 µA/µm (63.5 µA/mil)
- Ordering option code B23: 4 mV/µm (101.6 mV/mil)
- Ordering option code B24: 1.25 µA/µm (31.75 µA/mil)

Linear measurement range (typical)
- Ordering option code B21: 0.15 to 2.15 mm, corresponding to a −1.6 to −17.6 V output
- Ordering option code B22: 0.15 to 2.15 mm, corresponding to a −15.5 to −20.5 mA output
- Ordering option code B23: 0.3 to 4.3 mm, corresponding to a −1.6 to −17.6 V output
- Ordering option code B24: 0.3 to 4.3 mm, corresponding to a −15.5 to −20.5 mA output

Linearity

Frequency response

Interchangeability of elements

All components in chain are interchangeable.

For specific parameters of the mode of protection concerned and special conditions for safe use, please refer to the Ex certificates that are available from Meggitt SA.

For an IQS900 signal conditioner with protection mode “Ex” located in an Ex Zone 2, the user must ensure that the IQS900 is installed in an industrial housing or enclosure that ensures a protection rating of at least IP54 (or equivalent).

For the most recent information on the Ex certifications that are applicable to this product, refer to the Ex product register (PL-1511) document that is available from Meggitt SA.

Note: Some approvals/certifications are pending.
**System (chain) calibration**

Calibration temperature: +23°C ±5°C  
Target material: VCL 140 steel (1.7225)

Note: For applications using a non-standard or special target material, performance curves can be generated and supplied. Contact Meggitt SA for further information.

**Total system (chain) length**

The total system length (TSL) is the sum of the length of the TQ9xx sensor’s integral cable and the length of the EA90x extension cable. For TQ902/TQ912, EA902 and IQS900 proximity measurement chains, the supported TSLs are obtained from the following different combinations of cables.

Total system (chain) lengths

- **1 m**: 1.0 m integral cable with no extension cable
- **5 m**: 0.5 m integral cable + 4.5 m extension cable.  
  1.0 m integral cable + 4.0 m extension cable.  
  1.5 m integral cable + 3.5 m extension cable.  
  2.0 m integral cable + 3.0 m extension cable.  
  5.0 m integral cable with no extension cable.
- **10 m**: 0.5 m integral cable + 9.5 m extension cable.  
  1.0 m integral cable + 9.0 m extension cable.  
  1.5 m integral cable + 8.5 m extension cable.  
  2.0 m integral cable + 8.0 m extension cable.  
  5.0 m integral cable + 5.0 m extension cable.  
  10.0 m integral cable with no extension cable.

Note: The combination of cables selected for a particular total system (chain) length depends on the application. For example, to obtain the optimum location for the separation between the integral and extension cables or to eliminate the requirement for an extension cable.

**Total system (chain) length trimming**

Due to the characteristics of the coaxial cable, an “electrical trimming” of the nominal length of extension cables is necessary to optimize the system performance and the sensor interchangeability.

TSL for a 1 m measurement chain: 0.9 m min.  
TSL for a 5 m measurement chain: 4.4 m min.  
TSL for a 10 m measurement chain: 8.8 m min.

**In-situ test support**

Raw output: The raw output (RAW/COM) provides a “raw” voltage output signal that corresponds to the internal signals of the IQS900 signal conditioner, even if the IQS900 is configured for a current output. This allows the measurement chain/system operation from sensor to signal conditioner to be easily verified in situ.

Test input: The test input (TEST/COM) allows a voltage input signal to be injected at the input to the IQS900 signal conditioner in order to test the IQS900 itself and/or cabling to the monitoring system. This allows the measurement chain/system operation from signal conditioner to monitoring system to be easily verified in situ.

Note: See Connectors on page 10 and refer to the Proximity measurement chains using TQ9xx proximity sensors installation manual for further information.

General
Sensor input requirements: High-frequency power source from an IQS900 signal conditioner

Environmental
Temperature range
• Sensor: −40 to 180°C (−40 to 356°F) operating.
  180 to 220°C (356 to 428°F) short-term survival for 2 hours max.
• Sensor and cabling
• Cabling, connector and optional protection: −40 to 200°C (−40 to 392°F)

Measurement drift
• Sensor and cabling with a total system (chain) length of 1, 5 or 10 m: <5% for −40 to 180°C (−40 to 356°F)

Pressure
• Sensor: 6 bar (100 psid) between sensor tip and body

Humidity
• Sensor and integral cable assembly: 0 to 95%, non-condensing.
  100% max., condensing (not submerged).

Protection rating (according to IEC 60529)
• The head of the sensor (sensor tip and integral cable) is rated IP68

Vibration (according to IEC 60068-2-26)
• 5 g peak between 10 and 500 Hz

Shock acceleration (according to IEC 60068-2-27)
• 15 g peak (half sine-wave, 11 ms duration)

Physical characteristics
Sensor construction: Wire coil Ø8 mm, PPS (polyphenylene sulfide) high-performance thermoplastic tip, crimped to a stainless-steel body (AISI 316L)
Integral and extension cables: FEP covered 70 Ω coaxial cable, Ø3.6 mm
Connectors: Self-locking miniature coaxial connectors.
  Note: When connecting, these should be hand-tightened until locked.
Optional protection
• Flexible stainless-steel hose (protection tube) with FEP sheath (extruded fluorinated ethylene propylene)
  The combination of stainless-steel hose with FEP sheath provides sealed (leak-tight) mechanical and electrically insulated protection.
  Note: The FEP sheath also provides resistance to almost all chemicals and low permeability to liquids, gases and moisture.
  While being flexible, low friction and mechanically tough.
SPECIFICATIONS (continued)

IQS900 signal conditioner

Current output (2-wire signal transmission)

Current at min. / max. gap : −15.5 mA / −20.5 mA
Measurement range : 5 mA (corresponding to 2 or 4 mm)
Output sensitivity : See Operation on page 3 and IQS900 signal conditioner on page 15

Nominal output signal
• Without diagnostics : −15.5 to −20.5 mA
• With diagnostics : −15.5 to −20.5 mA indicates normal operation.
  Other current values (>−15.5 or <−20.5 mA) indicate a problem with the measurement chain (sensor, cabling and/or signal conditioner).
  Note: −8.5 mA typically indicates a problem with the power supply (for example, too high or too low). Although this value can also be due to other problems with the measurement chain or its power supply.

Output impedance : >60 kΩ.
Note: Recommended monitoring system input impedance: ≤350 Ω.

Voltage output (3-wire signal transmission)

Voltage at min. / max. gap : −1.6 V / −17.6 V
Measurement range : 16 V (corresponding to 2 or 4 mm)
Output sensitivity : See Operation on page 3 and IQS900 signal conditioner on page 15

Nominal output signal
• Without diagnostics : −1.6 to −17.6 V
• With diagnostics : −1.6 to −17.6 V indicates normal operation.
  Other current values (>−1.6 or <−17.6 V) indicate a problem with the measurement chain (sensor, cabling and/or signal conditioner).
  Note: −50 mV typically indicates a problem with the power supply (for example, too high or too low). This value can also be due to other problems with the measurement chain or its power supply.

Output impedance : <100 Ω at DC.
<300 Ω at 20 kHz.
Note: Recommended monitoring system input impedance: ≥50 kΩ.

Short-circuit protection : Yes
Short-circuit current : 35 mA
Power supply (to IQS900)

Input voltage range
- Nominal: \(-24 \text{ V}_{\text{DC}} \pm 25\% \) (\(-18 \text{ to } -30 \text{ V}_{\text{DC}}\))
- Current output (2-wire signal transmission): \(-18 \text{ to } -30 \text{ V}_{\text{DC}} \pm 0.6 \text{ V}_{\text{DC}}\)
- Voltage output (3-wire signal transmission): \(-19 \text{ to } -30 \text{ V}_{\text{DC}} \pm 0.6 \text{ V}_{\text{DC}}\)

Current consumption (with nominal 24 V\(_{\text{DC}}\) supply): 25 mA max.

Overvoltage protection: Yes

Note: The IQS900 should be powered (energised) using a low-voltage power supply such as a sensor power supply output provided a VM600 or VibroSmart\textsuperscript{®} monitoring and/or protection system, a G31127 galvanic separation unit or other suitable power supply.

In safety-related applications, an IQS900 must be powered using a power supply with a safe limitation of \(-35 \text{ V}_{\text{DC}}\), even in the event of a single fault with the power supply.

Environmental

Temperature
- Operating and storage: \(-40 \text{ to } 85^\circ\text{C} \) (\(-40 \text{ to } 185^\circ\text{F}\))
- Humidity: 0 to 95%, non-condensing

Protection rating (according to IEC 60529): IP20.

Note: The IQS900 is suitable for indoor use only unless it is installed in an industrial housing or enclosure that ensures a higher level of environmental protection.

Flammability: UL94 V-0

Vibration (according to IEC 60068-2-6): 5 g peak between 10 and 500 Hz

Shock acceleration (according to IEC 60068-2-27): 15 g peak (half sine-wave, 11 ms duration)

Altitude: 4000 m (13100 ft) max.

Connectors

Self-locking miniature coaxial connector (bidirectional): 1 contact for sensor-side signal: sensor (connects to TQ9xx sensor or EA902 cable)

Screw-terminal connector (input): 4 contacts for test signals: raw output (RAW/COM) and test input (TEST/COM)

Screw-terminal connector (output): 4 contacts for monitor-side signals: measurement output (O/P/COM) and power supply input (\(-24\text{V}/\text{COM}\))

Clamping range: 0.2 to 1.5 mm\(^2\)

Note: The IQS900 features removal screw-terminal connectors that can unplugged from the main body of its housing to simplify installation and mounting.

Notes
See following page.
MECHANICAL DRAWINGS AND ORDERING INFORMATION (continued)

IQS900 signal conditioner (continued)

Notes
1. Ordering option code A5 (“Ex”) specifies an IQS900 signal conditioner suitable for use for use in hazardous areas.
   • For an IQS900 signal conditioner with protection mode “Ex” located in an Ex Zone 2, the user must ensure that the IQS900 is installed in an industrial housing or enclosure that ensures a protection rating of at least IP54 (or equivalent).

2. Ordering option code C specifies an IQS900 signal conditioner either without diagnostics (C1) or with diagnostics (C2):
   • An IQS900 signal conditioner without diagnostics (C1) is similar to the IQS45x, which it replaces. The IQS900 is a form, fit and functionally equivalent replacement that matches or betters the measurement specifications of the IQS45x.
   • An IQS900 signal conditioner with diagnostics (C2) includes optional diagnostic circuitry that automatically detects and remotely indicates problems with the measurement chain (sensor, cabling and/or the IQS900 itself). An IQS900 with diagnostics is certified SIL 2 (IEC 61508) and Pl. c Cat 1 (ISO 13849) “by design” to more easily meet the requirements of safety-related applications. Contact Meggitt SA for further information.

**ACCESSORIES (continued)**

**MA130 DIN-rail mounting adaptor**

DIN-rail mounting kit for IPC707 and IQS900 signal conditioners

2 × self-tapping cross-head (Phillips) screws. Type: Pan-head Pt® screws, H drive, 4 × 10, A2 (304) stainless steel. Mounting torque: 0.6 N•m (0.44 lb-ft).

3 × self-tapping cross-head (Phillips) screws. Type: Pan-head Pt® screws, H drive, 4 × 10, A2 (304) stainless steel. Mounting torque: 0.6 N•m (0.44 lb-ft).

Note: All dimensions in mm (in) unless otherwise stated.

Ordering number (PNR): 809-130-000-021
Meggitt (Meggitt PLC) is a leading international engineering company, headquartered in England, that designs and delivers high-performance components and subsystems for aerospace, defence and selected energy markets. Meggitt comprises four customer-aligned divisions: Airframe Systems, Engine Systems, Energy & Equipment and Services & Support.

The Energy & Equipment division includes the Energy Sensing and Controls product group that specialises in sensing and monitoring solutions for a broad range of energy infrastructure, and control valves for industrial gas turbines, primarily for the Power Generation, Oil & Gas and Services markets. Energy & Equipment is headquartered in Switzerland (Meggitt SA) and incorporates the vibro-meter® product line, which has over 65 years of sensor and systems expertise and is trusted by original equipment manufacturers (OEMs) globally.

All information in this document, such as descriptions, specifications, drawings, recommendations and other statements, is believed to be reliable and is stated in good faith as being approximately correct, but is not binding on Meggitt (Meggitt SA) unless expressly agreed in writing. Before acquiring and/or using this product, you must evaluate it and determine if it is suitable for your intended application. You should also check our website at www.meggittsensing.com/energy for any updates to data sheets, certificates, product drawings, user manuals, service bulletins and/or other instructions affecting the product.

Unless otherwise expressly agreed in writing with Meggitt SA, you assume all risks and liability associated with use of the product. Any recommendations and advice given without charge, whilst given in good faith, are not binding on Meggitt SA. Meggitt (Meggitt SA) takes no responsibility for any statements related to the product which are not contained in a current Meggitt SA publication, nor for any statements contained in extracts, summaries, translations or any other documents not authored and produced by Meggitt SA.

The certifications and warranties applicable to the products supplied by Meggitt SA are valid only for new products purchased directly from Meggitt SA or from an authorised distributor of Meggitt SA.

In this publication, a dot (.) is used as the decimal separator and thousands are separated by thin spaces. Example: 12345.67890.
