

Parker Meggitt SA  
Motion, Power & Sensing Division  
Rte de Moncor 4  
1752 Villars-sur-Glâne, Switzerland

TO: All vibro-meter channel partners

DATE: Villars-sur-Glâne, 3<sup>rd</sup> December 2024

**Gradual discontinuation of PiezoCryst products CP5xx; last time buy order opportunity; introduction of CP751.**

To whom it may concern:

We're reaching out to you in order to inform you that throughout the year 2025 Parker Meggitt will stop cooperation with PiezoCryst. While we trust these products have served you and your customers well, Parker Meggitt is committed to offering our customers the best possible measurement and monitoring solutions, to help to get the most from their machinery. This naturally involves updating and replacing items in our product range.

We wanted to bring to your attention that the supply of all CP5xx sensors will be terminated by end of 2025. We can fulfill current forecasts until Q3/Q4 2025; however, the product supply is limited as critical sub-components availability is beyond our control. To ensure a secure supply, we strongly recommend using this last-time-buy opportunity and place a final order no later than end of February 2025.

As a result of this new strategic focus, we're excited to introduce the next-generation **Vibro-Meter® CP751 dynamic pressure transducers**, designed to replace outgoing CP515, CP532, CP502 sensor. The CP751 offers improved performance, reliability, and features that align with our commitment to innovation and customer satisfaction.

Within the datasheet you will find the drawings related to the new Vibro-Meter® CP751 dynamic pressure sensor, the matching adapters, and conditioners to be used. It is available on our website, with all detailed information:
