Subject: Meggitt's technology used at Hydro-Quebec

To whom it may concern,

Hydro-Quebec owns and operates more than 360 hydroelectric machines with a total installed capacity of more than 37 000 MW (production of 209 TWh in 2018). For further details, please visit our web site: www.hydro-quebec.com.

Since 1987, we use the Meggitt instrumentation to protect our machines based on the monitoring of mechanical parameters like vibration, temperature flow, level and pressure. We have more than 400 monitoring racks installed to this date on hydro generator units ranging from 5MW to 442MW e.g. La Grande 2 (16X351 MW), Eastmain-1 (3X160 MW), Manic-5 (8X194 MW) and several others.

Hoping this information is helpful; please do not hesitate to contact the undersigned should you have any questions.

Jean-François Rochefort, P.Eng.
Head of Orientation, Digital Architecture & Remote Monitoring Unit
