VM600 MK1 system – discontinuation of the CPUM communication card

Dear Customer,

This letter is to inform you that the CPUM communication card for VM600 Mk1 is being phased out due to the obsolescence of key electronic component for which there is no alternative.

The impacted part numbers (PNRs) are:

- 200-595-SSS-33h for the CPUM card standard version (Ethernet redundant)
- 200-595-SSS-33hL for the CPUM card standard version (Ethernet redundant) with conformal coating
- 200-595-SSS-34h for the CPUM card isolated version
- 200-595-SSS-52h for the CPUM card Ethernet and serial redundant version
- 601-003-000-004 for the CPUM card preconfigured
- VM600SYS when a CPUM card is ordered as part of an assembled and configured system.

It is important to note that there is no fully equivalent VM600/VM600^{Mk2} replacement product available but there are still a number of cards available. For VM600, the alternative proposed is the CPUR2 card offering the same feature set with exception of the embedded display and Modbus RTU. For VM600^{Mk2}, the CPUM^{Mk2} is replacing the CPUM card.

Accordingly, please contact Meggitt if you think you will be affected by the discontinuation of this product.

Please do not hesitate to contact your Meggitt representative for any assistance regarding this announcement.

Yours faithfully,

Michaël Hafner
