VM600^{Mk2}

MACHINERY PROTECTION SYSTEM

VM600^{Mk2} in comparison to VM600^{Mk1}

Presented by Krzysztof Solinski
Sr. Applications Engineer

Introduction 3

Comparison of MPC4^{Mk2} and MPC4^{Mk1} 4

Comparison of RLC16^{Mk2} and RLC16^{Mk1} 5

Insight into specific features 6-16

Compatibility 19

Q&A 21

VM600 Mk2 in comparison to VM600Mk1

OVERVIEW

Next generation protection system

VM600^{Mk2} – Main components

CPUM^{Mk2}
(+ IOCN^{Mk2})

VM600^{Mk2}

MPC4^{Mk2}
(+ IOC4^{Mk2})

RLC16^{Mk2}

MPC4^{Mk2} + IOC4^{Mk2}

Overview of differences between MPC4^{Mk1} and MPC4^{Mk2}

Feature	MPC4 ^{Mk2}	MPC4 ^{Mk1}
[MPC4] ADC input resolution	24 bit	12 bit
[MPC4] Sensor OK delay	User configurable	10 s (fixed)
[MPC4] Frequency signal analysis	Yes (Band RMS, Band Peak, Residual signal)	No
[MPC4] Waveforms and spectra for troubleshooting (VibroSight Vision)	Yes	No
Extended logical function	32 Advanced	8 Basic and 4 Advanced
[MPC4] Hot swapping feature	Yes (configuration stored on the IOC4 ^{Mk2})	Yes (but only with the CPUM)
Auxiliary inputs can be used for tacho signals as well as quasi- static signal processing	Yes	No
MPC4 status relay (common-circuit fault)	Yes	No
Monitoring of RLC16 ^{Mk2} module status	Yes (RLC16 ^{Mk2})	No
Relay arrangement	5 relays, all contacts available, jumperless configuration	4 relays, only NO or NC available, jumper-based configuration

MPC4^{MK2} + IOC4^{MK2}

IOC4^{Mk2} connectors

RLC16^{Mk2}

Overview of differences between RLC16^{Mk1} and RLC16^{Mk2}

Feature	RLC16 ^{Mk2}	RLC16 ^{Mk1}
Machinery protection relays	16	16
Epoxy sealed relays with all contacts available	Yes	No
NO/NC contacts and normally energized (NE) or normally de-energized (NDE) configuration without jumpers	Yes	No
Raw bus output line to communicate the RLC16 status	Yes	No
Raw bus input line to de-energize all NE relays (known as the Redline signal)	Yes	No

RLC16^{Mk2}

Overview of differences between RLC16^{Mk1} and RLC16^{Mk2}

RLC16^{Mk1} connectors are 1 to 1 compatible with RLC16^{Mk2}

VM600 Mk2 in comparison to VM600Mk1

VM600^{Mk2}

advantages

MPC4^{MK2} + IOC4^{MK2}

Analog input range and resolution

Higher resolution and dynamic range (>80 dB)

- New analog front-end.
- 24 bit analog-to digital converter (ADC) ensures significantly better amplitude resolution.
- Two selectable input ranges input ranges for better input dynamic range depending application.

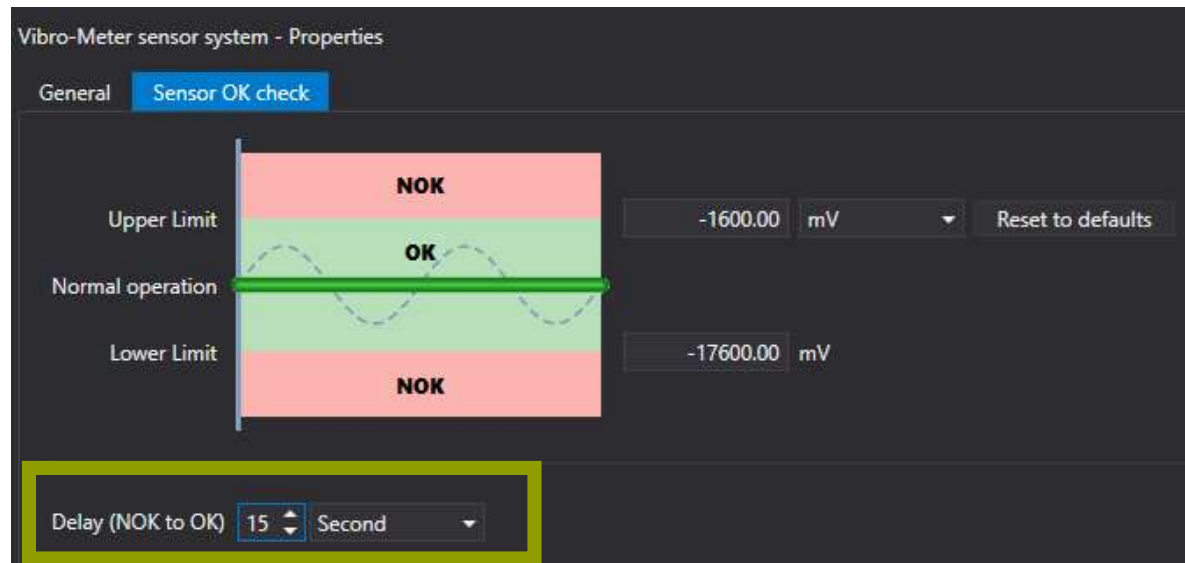

MPC4^{MK2} + IOC4^{MK2}

Sensors OK delay

The time (delay) which the sensor / measurement chain has to remain within the Sensor OK check limits can now be:

- Set to any arbitrarily chosen value.
- Set individually for each measurement chain.

MPC4^{MK2} + IOC4^{MK2}

Fixed Frequency and order tracking analysis

Dynamic signals can be processed in both time and frequency domains. Multiple signal extractions are available:

- 1X, 2X, 3X, ...

(Vector)

- Not 1X

(Scalar)

- Band RMS

(Scalar)

- Band Peak

(Phasor)

Shaft relative vibration

Bearing absolute vibration

Broad band pressure

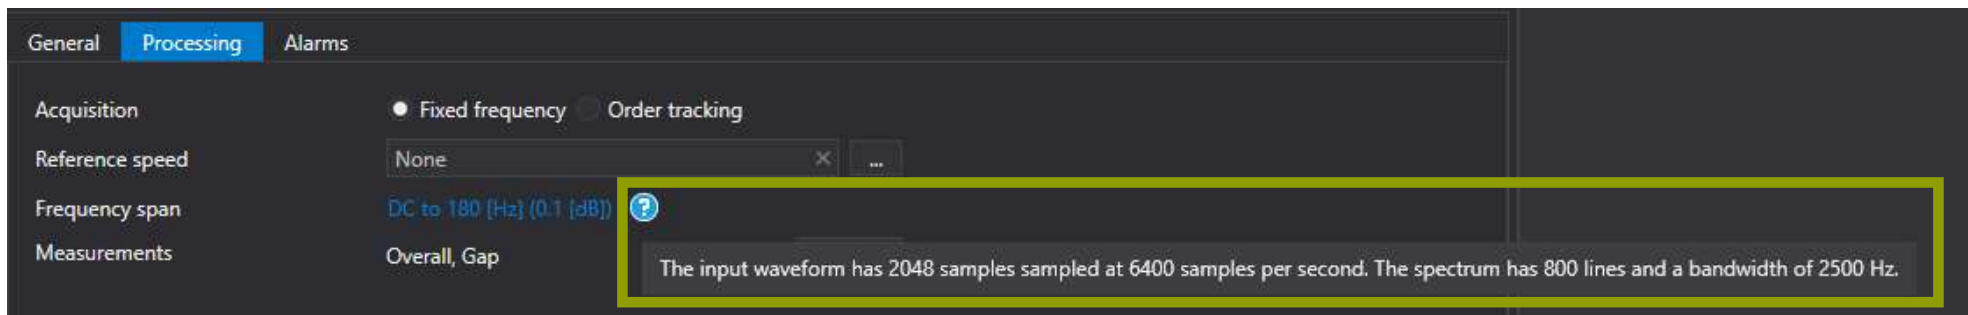

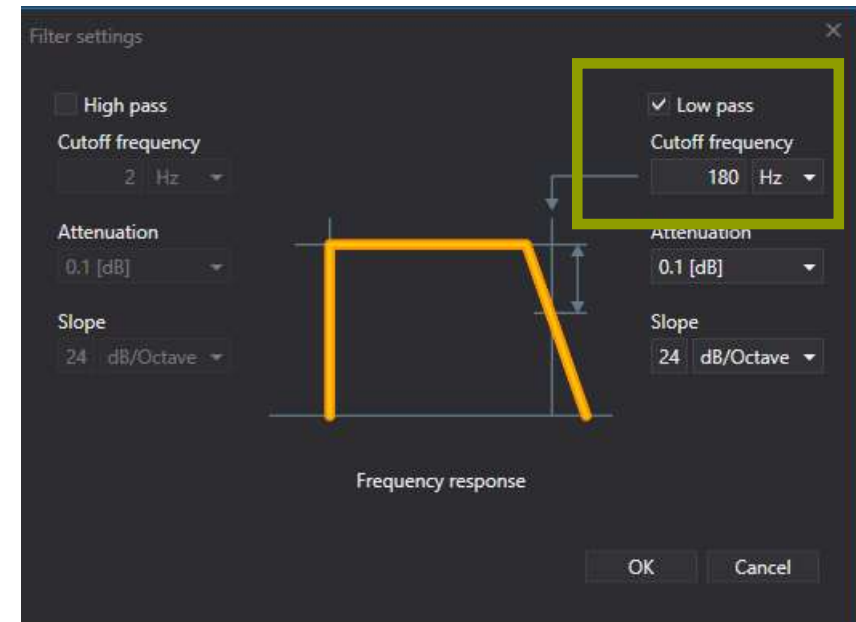

MPC4^{MK2} + IOC4^{MK2}

Fixed-frequency signal analysis

Fixed-frequency signal analysis allows examine the signal in both time and frequency domain:

- 800 lines spectra (corresponding to 2048 sample waveforms).
- Hanning (Hann) window.
- High frequency limit of the spectrum depends on the filter setup
 - High frequency spectrum limit is always several times higher than the **Cutoff frequency** of the **Low pass** filter.

MPC4^{MK2} + IOC4^{MK2}

Properties of fixed-frequency spectra

Fixed-frequency signal processing allows user to extract not only the frequency domain signal extraction but also time domain extractions, which are calculated basing on signal waveforms which are oversampled for better precision

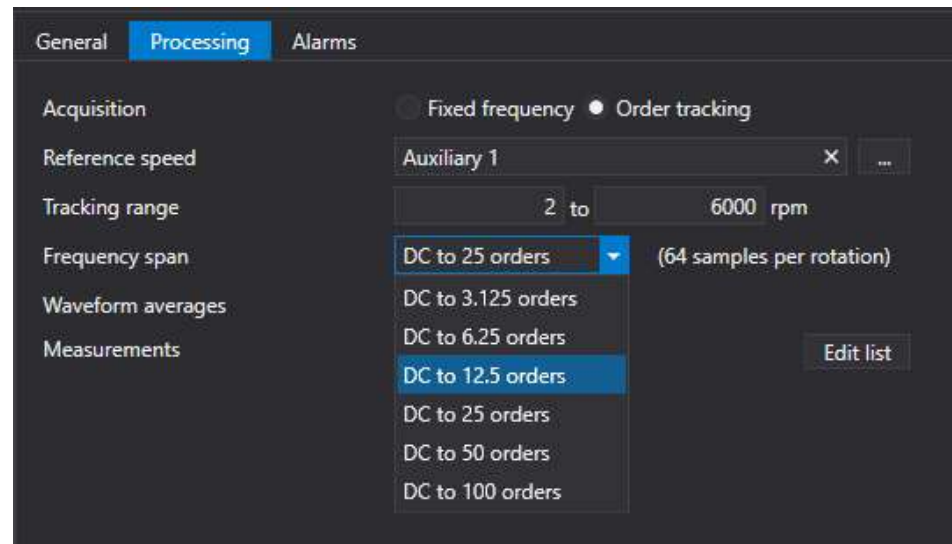

MPC4^{MK2} + IOC4^{MK2}

Order tracking

Order-tracked spectra:

- Flat-top window.
- High order spectrum limit is setup by the user
 - VibroSight Protect informs the user about the number of samples per revolution.
 - Only frequency domain extractions are available

MPC4^{Mk2} + IOC4^{Mk2}

Auxiliary channels

In MPC4^{Mk2} features 2 Auxiliary inputs / channels which can be used for measurement of:

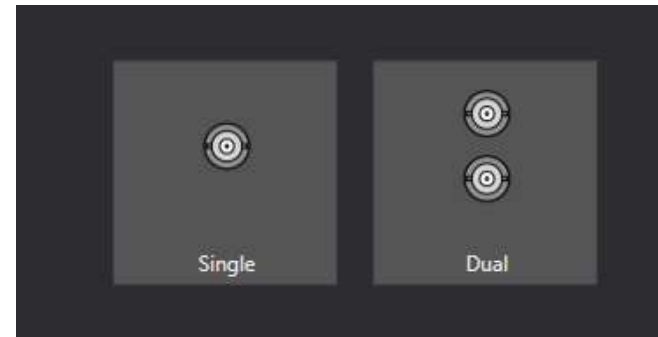

- Rotation speed (Tacho)

- Quasi static signals

- Dual processing

MPC4^{Mk2} + IOC4^{Mk2}

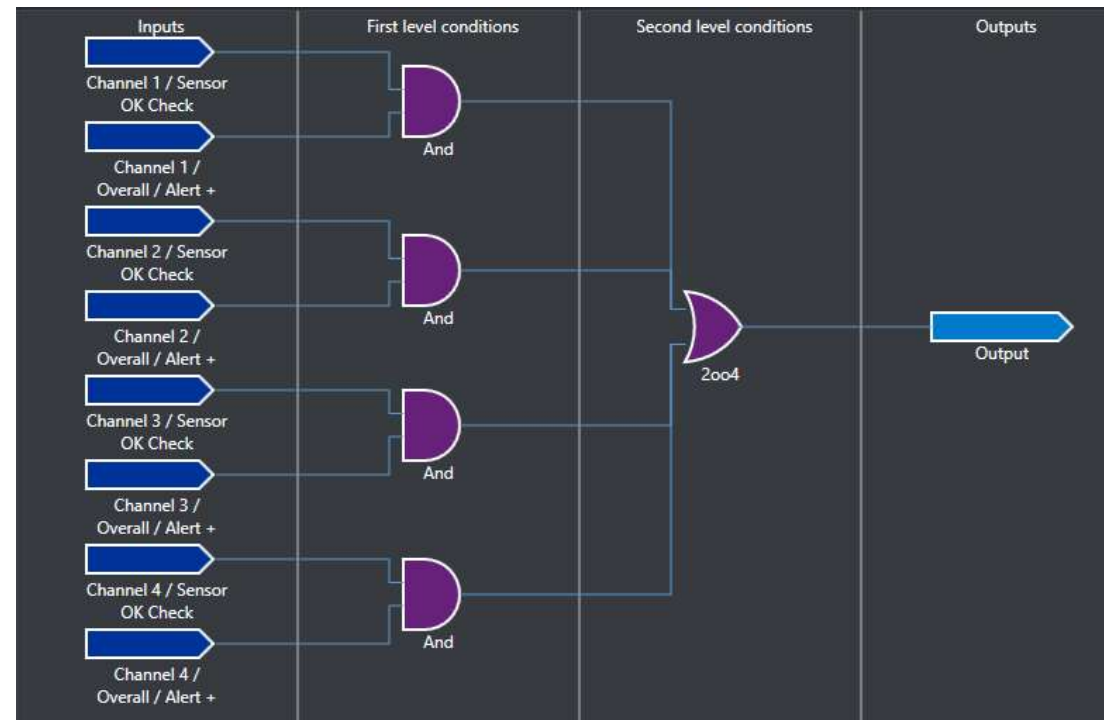

Logical functions

MPC4^{Mk2} provides advanced logical functions that are much easier and straight forward to configure as they are based on logical gates:

- 32 logical functions per module.
- 32 inputs per logical function.
- Logical inputs can be inverted.

Inverted input

MPC4^{Mk2} + IOC4^{Mk2} and RLC16^{Mk2}

Relays

MPC4^{Mk2} (+ IOC4^{Mk2}) provides new relay functionality:

- Jumperless configuration of **Normally Energized (NE)** and **Normally De-Energized (NDE)**.
- **Relay** position can be **Latched** even if it is associated with a not latched alarm.

Relay 1: Relay1: CH1 Alert+SOK

Enabled ☒

Tag name Relay1: CH1 Alert+SOK ☐ Auto

Description

Relay settings

Mode ☒ Normally Energized (NE) ☐ Normally De-Energized (NDE) ?

Input VM600 - 6U_KSOL / Slot 03 / MPC4 Slot 03 / Logical fun X ...

Latched ☐ ?

Contact state table

		Module powered off		Module powered on	
				Relay input off	Relay input on
Contact	NO	open		closed	open
	NC	closed		open	closed

New module: MPC4^{Mk2} + IOC4^{Mk2}

Hot swap

MPC4^{Mk2} features hot swap functionality:

- Configuration is stored on IOC4^{Mk2}.
- CPUM^{Mk2} module not required.

New module: MPC4^{Mk2} + IOC4^{Mk2}

Easier Maintenance

Each MPC4^{Mk2} stores the configurations for itself and all other MPC4^{Mk2} module in the rack.

The configurations are all readily available for:

- Easier configuration management.
- Easier rack maintenance.

RLC16^{Mk2}

Features

- For higher reliability, RLC16^{Mk2} has fewer jumpers than its predecessor (MPC4^{Mk2} determines if the relay is NDE or NE).
- RLC16^{Mk2} has an internal check that confirms the energization status of each relay, compared to the commands sent by MPC4^{Mk2}.

Watch RLC16 relay status

- RLC16^{Mk2} communicates its status to MPC4^{Mk2} using a module **Status** signal (Raw bus line). In case of a fault, MPC4^{Mk2} will go to the fail-safe state and use the **Redline** signal to de-energise all NE relays on RLC16^{Mk2}.

One MPC4^{Mk2} can monitor one RLC16^{Mk2}.

RAW bus			
Lines	RLC16 Slot 01 RLC16	MPC4 Slot 03 MPC4	MPC4 Slot 04 MPC4
31	Status	Status	
63	Redline	Redline	

MPC4^{Mk2}

RLC16^{Mk2}

Status

Red line

VM600 Mk2 in comparison to VM600Mk1

COMPATIBILITY

MPC4^{Mk2} + IOC4^{Mk2} and RLC16^{Mk2}

Compatibility

- VM600^{Mk2} can replace VM600^{Mk1} hardware providing the same functionality extended with new benefits and features.
- Racks configured at Meggitt SA will feature VM600^{Mk2} or VM600^{Mk1} modules.
- It is possible to have VM600^{Mk2} and VM600^{Mk1} modules in the same rack
 - In cases in which the Raw bus is not used.
 - In case in which the Raw bus lines are used, it has to be guaranteed that there are no conflicts in Raw bus signal routing, so some system checks are required!

MPC4^{Mk2} + IOC4^{Mk2} and RLC16^{Mk2}

Compatibility with VM600 Mk1 hardware

- MPC4^{Mk2} can send logic signals to RLC16^{Mk1}:
 - Bus lines must be configured in accordance with the hardware manual and necessary checks have to be carried out in order to ensure proper functionality.
 - The MPC4^{Mk2} module's "**Watch RLC16 Status**" option has to be **disabled** (VibroSight Protect).
- MPC4^{Mk1} can work with RLC16^{Mk2} but following limitations have to be taken into account:
 - Bus lines must be configured in accordance with the hardware manual and necessary checks have to be carried out in order to ensure proper functionality.
 - Relays must be configured as **Normally De-Energized (NDE)** only.

VM600^{Mk2}

Machinery protection and condition monitoring system

The VM600^{Mk2} is the next generation rack-based system for advanced machinery protection and condition monitoring, specially designed for critical rotating machinery.

Why VM600^{Mk2} systems?

The Mk2 system is an evolution of the bestselling VM600 system and the result of 65+ years of domain expertise. With over 8,000 systems installed worldwide the VM600 system have become standard-fit components in Power Generation, Oil & Gas and other industrial applications.
